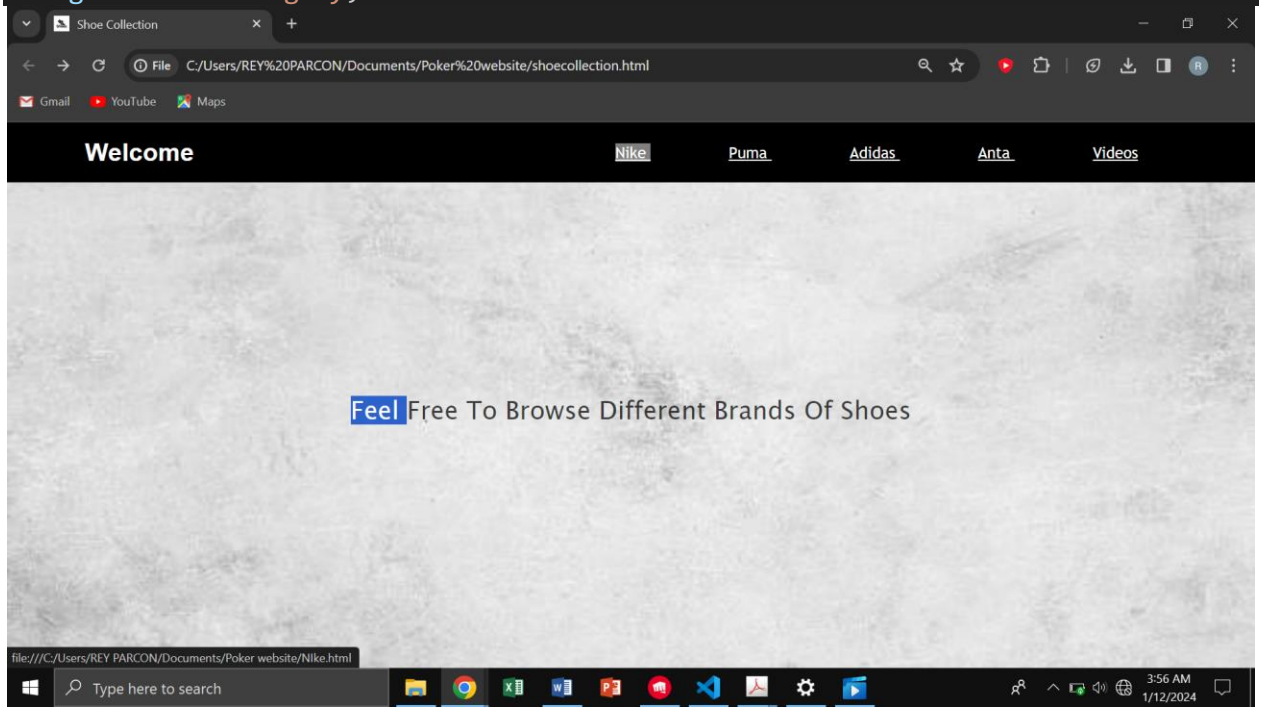
How Tos

This is what I added to my website:

Button:

```
 color: white;
background-color: grey;
```



- As you can see the background color changes color when you hover into it.

Top button:

```
  <button id="myBtn">top</button>
  <script src="main.js">
const myButton= document.getElementById('myBtn');

window.onscroll= function() {scrollFunction()};

function scrollFunction(){
    if(document.body.scrollTop > 10 || document.documentElement > 10){
        myButton.style.display = "block";

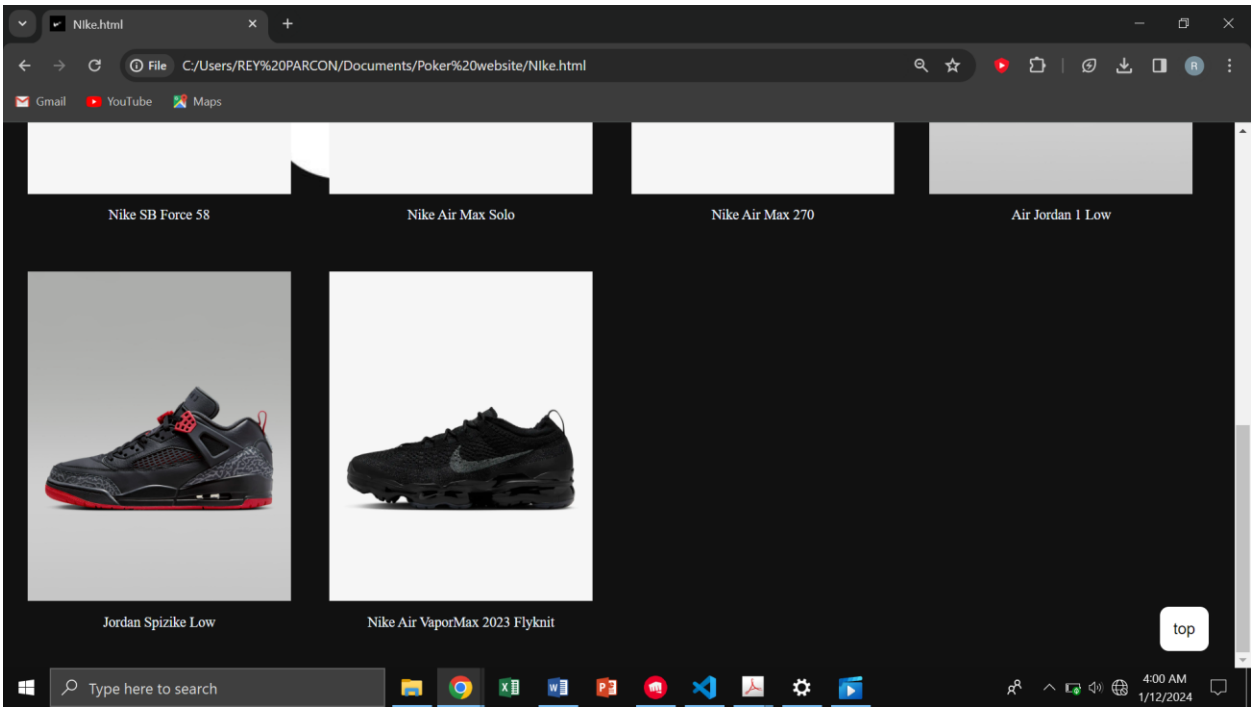
    }

else{
    myButton.styl.display = "none";
}
```

```
}
myButton.addEventListener('click',()=>{
    document.body.scrollTop = 0;
    document.documentElement.scrollTop = 0;

})
```

```
#myBtn{
    position: fixed;
    bottom: 20px;
    right: 30px;
    z-index: 99;
    border: none;
    outline: none;
    background-color: white;
    padding: 15px;
    border-radius: 10px;
    font-size: 18px;
    cursor: pointer;
```

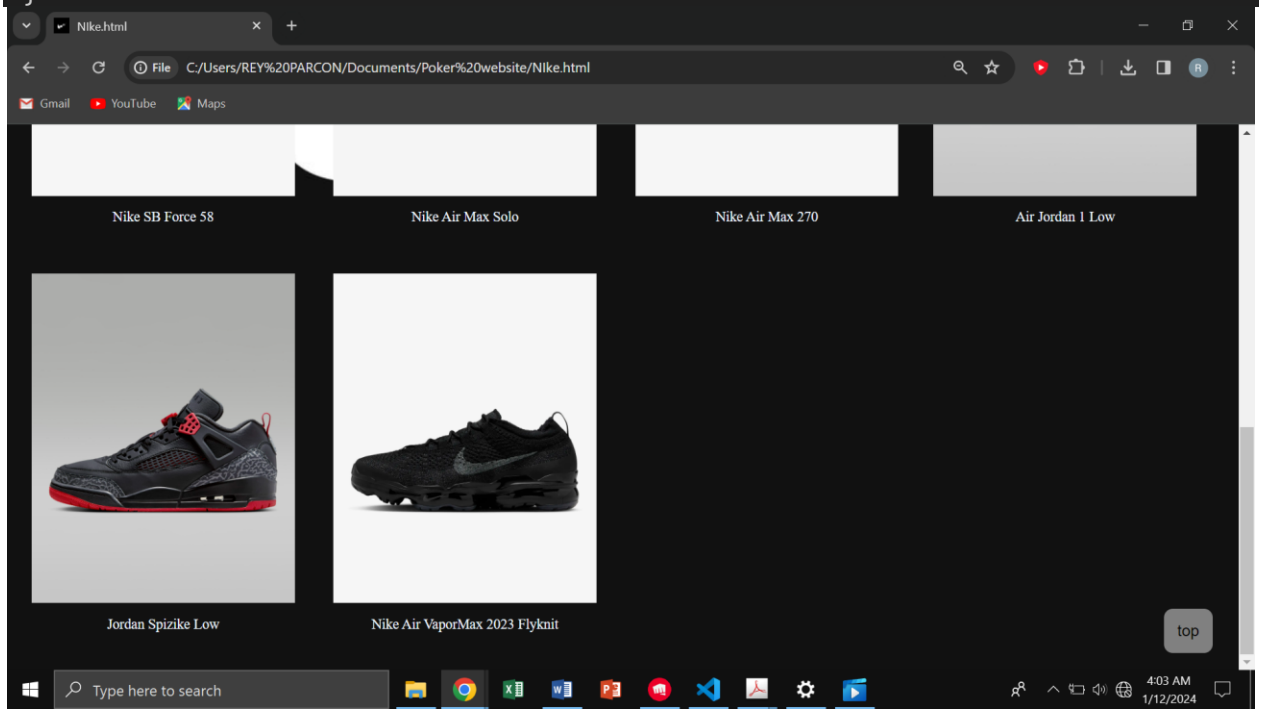


- As you can see there is a top button, the top button can redirect you at the top part of the page at one click.

Top button Hover:

```
#myBtn:hover{
    background-color: grey;

}
```



-As you can see the background color of the top button changes when you hover into it

Cursor:

```
cursor: pointer;
```

As you can see the cursor is cannot be seen when being screenshotted so I cannot paste a picture in here

Video:

```
<iframe width="100%" height="600px" src="video.mp4" frameborder="0"
allowfullscreen></iframe>
```
